

workshop-Building Production-Ready Data Systems for AI Applications appendix

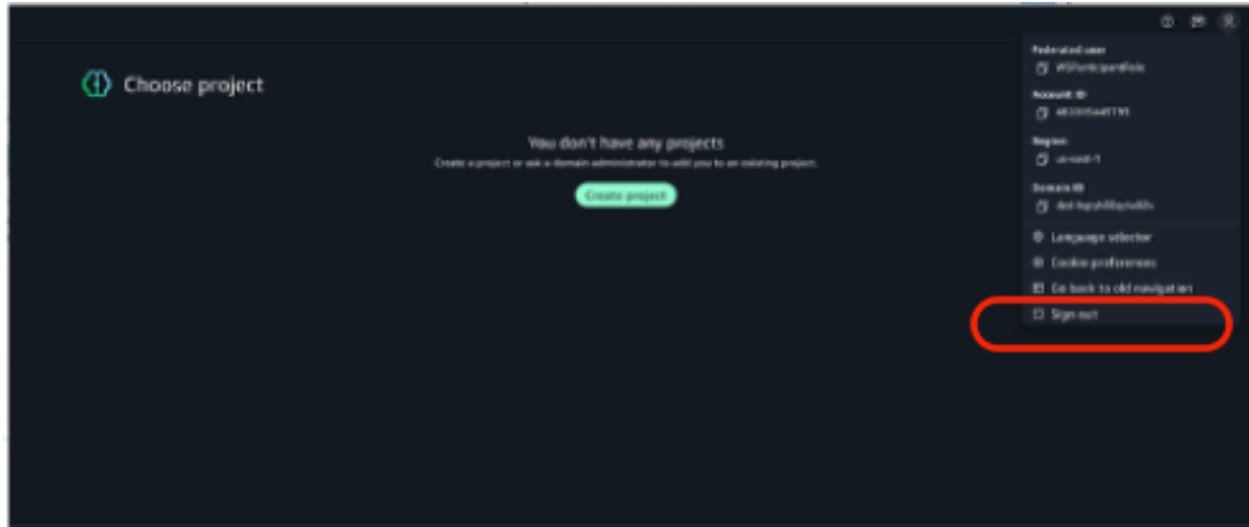

Section 1: Getting started -> Part: Disable MFA & Reset passwords

The screen to Reset passwords for dg-data-owner and dg-business-analyst has changed

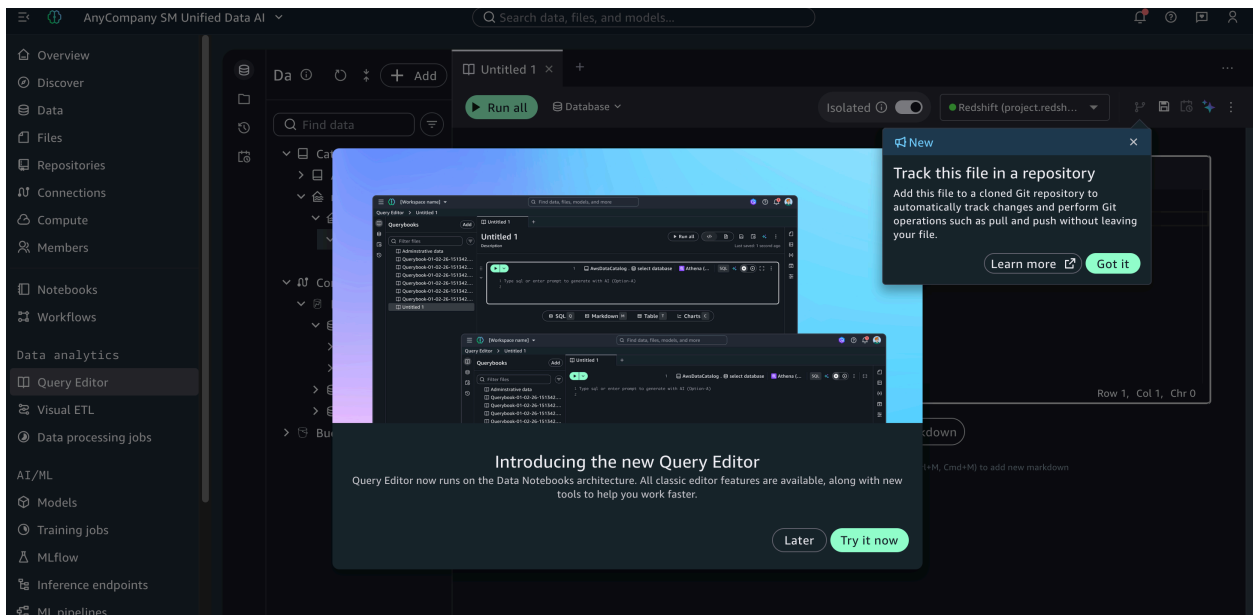

Section 2 : building data product - part 2a: Setup RMDcatalog

- When signing into SMUS. You might have a message saying you do not have any projects =>, need to sign out first and resign in using SSO and provided user

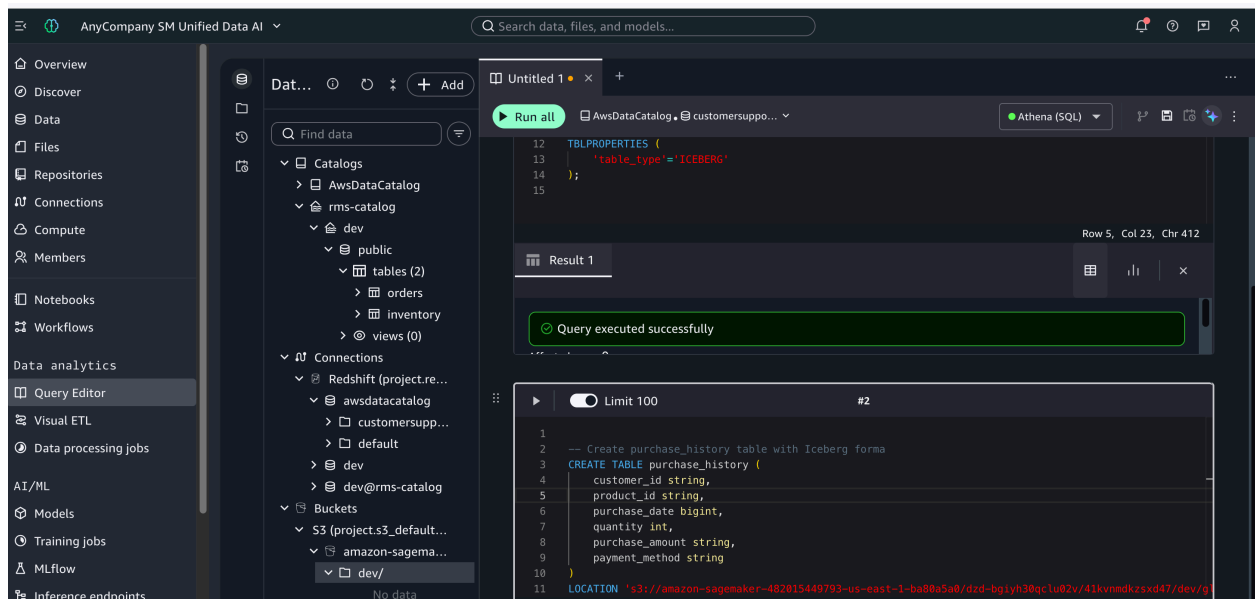

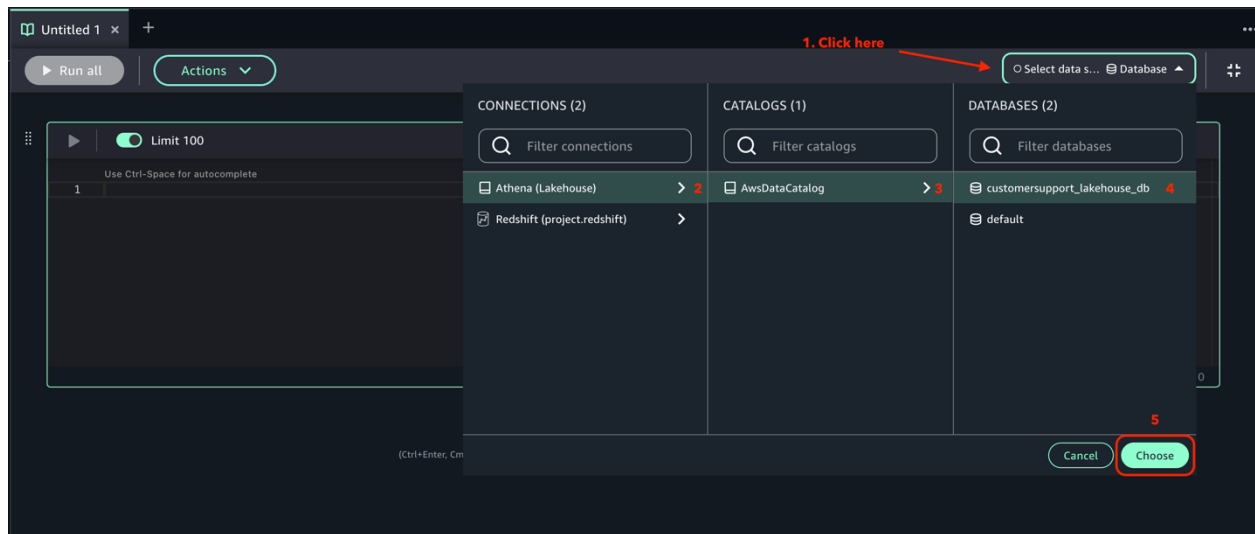

Section 2 : building data product - part 2a loading into redshift

- 1) This screenshot is not mentioned in the instruction. Just select yes or no. both are fine

- 2) There is no “Athena Lakehouse” like shown in the Screenshot 1 below like in the instruction and screenshot 2 shows “Athena AQL” option to select instead

Section 2 Part 2b

From the “arn “that was copied earlier then need to remove the first of the “arn “by keeping only the role

Run details

Apply ruleset and run to evaluate data quality.

Data quality ruleset
product_catalog_check

IAM role
Role assumed by the task with permission to access your data stores.
datazone_usr_role_3lb0r0u195767b_awbe6o8zmsjyuf  [View](#)

☐ Set as default IAM role for this account.

Data quality actions - optional
Action carried out on run.
☒ Publish run metrics to Amazon CloudWatch

 Data quality events are published to [Amazon EventBridge](#). You can set up alerts and integrate with other services. [Learn more](#)

Data quality result location - optional
Save the output data quality results to a target S3 bucket.

 s3://bucket/prefix [View](#) [Browse S3](#)

☐ Set as default location for all data quality results. [Learn more](#)

Run frequency
Schedule data quality evaluation runs using Amazon EventBridge. [Learn more](#)
On demand

► Additional configurations

[Cancel](#) [Run](#)

Section 2 part 2c: build data sources

The below does not exist screenshot 1, need to follow screenshot 2

▼ 1. Getting Started

Disable MFA & Reset passwords

▼ 2. Building Data Products

▼ Part 2a: Register Order dataset

Setup RMS Catalog

Loading data into Redshift

▶ Part 2b: Ingest Products dataset

▼ Part 2c: Publish data products

Build data sources

Auto-Generate Metadata

Publish the assets

▶ 3. Consuming Data Products

4. Clean Up

▼ AWS account access

Open AWS console (us-east-1)

Get AWS CLI credentials

Share feedback

Workshop catalog in AWS Builder

Event ends in 2 days 21 hours 57 minutes.

Build Order Management Data Source

1. Let us import metadata for `Order Management` tables from Redshift Serverless. Choose `AnyCompany SM Unified Data AI` project and click on **Data Sources** section under *Project Catalog*.
